## Press Release

---

### For Immediate Release

#### **V I Engineering Introduces Staffing Services for Test Engineering Professionals**

**Farmington Hills, MI 48331 – May 26, 2006** - V I Engineering, Inc., a recognized leader in test engineering, has launched a new division called VIE Staffing to provide staffing services for on site placement of test engineering resources; both contract and permanent.

VIE Staffing specializes in delivering resources with demonstrated skills using National Instruments LabVIEW, TestStand and LabWindows/CVI. VIE Staffing was formed to compliment V I Engineering's existing strong offering of supplying turn-key test systems, engineering information management and consulting services, for those customers who are interested in staff augmentation.

VIE Staffing's strong domain knowledge in the test engineering space differentiates them from other staffing companies by being able to quickly understand customer needs and effectively evaluate and match the capabilities of potential candidates. Senior technical resources participate in the candidate screening process by interviewing and administering standard tests to objectively assess skill levels with National Instrument tools. Should customer needs escalate, V I Engineering can step in and offer fixed price project help.

#### **About V I Engineering:**

V I Engineering has played a leadership role in the test engineering market for 14 years specializing in automated test equipment, engineering information management (EIM), Vista products & services and staffing services. Clients served are primarily Fortune 500 companies in the automotive, heavy equipment, life sciences and Mil/Aero industries. V I Engineering is a Select Integrator for National Instruments; one of only a small handful in the USA. The EIM division delivers test lab management solutions that drive operational efficiencies through faster customer response, visibility, throughput, traceability and consistency. EIM solutions include integration of the test request and configuration process with automated analysis & reporting, and search capability. Vista is a branded line of software tools, process consulting and advanced design training that improves programming productivity and quality through implementation of software engineering best practices.
